FAST-STAT THERMOSTATS — MULTIPLEXERS

INTRODUCTION

FAST-STAT wiring extenders are the HVAC contractors secret weapon when adding or upgrading equipment in existing buildings. It was developed to eliminate the hassle of pulling new wiring into retrofit projects, saving time and the cost of repairs to walls and ceilings. Don't avoid bidding on projects when pulling in new wiring is an unknown.

The FAST-STAT allows the control signals from a thermostat to be transmitted over existing wires. The FAST-STAT system is comprised of a Sending Unit and Receiving Unit, which require only two wires to send up to six separate control signals between them. Some models also provide 24 VAC to power newer programmable thermostats.

The FAST-STAT can also help when some of the leads in a four wire cable have been damaged.

The **Model 3000** is often used to add air conditioning to a heating system. It converts a 2-wire cable into a 4-wire cable (R, W, Y, G). It can also convert a 4-wire cable into a 6-wire cable for 2-stage heating, 2-stage cooling or heat pump conversions.

The **Model 5000** provides power, fan control, compressor control and 2-stage heating over a 2-wire cable (R, C, G, Y, W1, W2). It also provides 8-wire control over a 4-wire cable for other applications such as heat pumps, 2-stage heating and cooling and humidity control.

The **Model 7000** is designed for heat pump conversions such as when adding a heat pump to an existing heating system or when upgrading an air conditioner to a heat pump. It can operate a heat pump over an existing 2-wire thermostat cable.
